

DaVinci 6-6 disc printer

Super fast - up to 120 discs per hour!

Perfect alignment every time

Single disc printers are cheap and produce great quality print but they are very slow and feeding one disc at a time is very tedious.

When you look to robotic printers they are typically much lower quality printing as well as being quite fussy about the discs they like to use.

Now with DaVinci, you can have the best of both worlds. Fast - up to 120 discs per hour, and spot-on alignment every time. You can have a 6 disc tray (standard) or 80mm or BizCard trays (optional).

Photo quality 6 colour printing

Micro Piezo™ technology

The DaVinci uses Epson Micro Piezo print heads that use piezoelectric pulses to propel the ink into the disc instead of heating it like other printers. This unique piezo system has also been designed to last the lifetime of your printer.

Micro Piezo print heads ensure precise control over ink, which helps the printer achieve great results on premium surface inkjet printable CD / DVD's.

Producing virtually grain free text and images. True photographic quality.

Very low running costs - bulk ink

Ink costs are the hidden extra you probably haven't thought of..

but it is often up to 30 cents per disk! The DaVinci 6-6 comes with a continuous inking system external tanks. This not only saves money, but it means that you don't have to replace ink cartridges. With tanks that take about 90ml of ink (about 10 times as much as some printers) you will be able to do many thousands of discs between refills.

Mac/Windows software included

The DaVinci 6-6 come ready to run, with preconfigured Windows and Mac software. If you would prefer to use your own software, no problem, just treat the trays as a large sheet of paper.
